

PITTSBURGH PIPE

SINCE 1977

THE RIGHT PIPE. RIGHT ON TIME.

PITTSBURGH PIPE HAS MANUFACTURED SPLIT STEEL CASING, ALSO REFERRED TO AS SPLIT STEEL CONDUIT, FOR OVER 20 YEARS.

When ease and speed of installation and uninterrupted service are a must, Pittsburgh Pipe's Split Casing is the best choice. We provide our Split Casing in 3 different styles to provide the right product for our customers.

SPLIT AND TABBED CASING

We start with a 10' section of either black or galvanized steel pipe that has been threaded and coupled, and then split longitudinally along its entire length. We then weld our pre-punched tabs to the side of both the pipe and the coupling. All hardware for simple field installation is included with sweeps and bends available as well.

SIZES AVAILABLE:

Diameter: 1" IPS to 12" IPS | **Wall Thickness:** 0.156" to 0.375"
Special Lengths Available Upon Request

ZIPPER CUT CASING

Standard sections of steel pipe are arc-gouged longitudinally on both sides to maintain the pipe's circularity. We leave a small section attached on both ends which can be cut in the field at the time of installation.

SIZES AVAILABLE:

Diameter: 4" IPS to 72" | Offered in a Full Range of Wall Thicknesses and Lengths

SPLIT FLANGED CASING

This product is perfect when field welding is not an option. The pipe is split longitudinally, split flanges are attached to both ends, and pre-drilled flat bars are attached to each horizontal side. All standard hardware for assembly is included.

SIZES AVAILABLE:

Diameter: 12" to 72" | Offered in a Full Range of Wall Thicknesses
Special Coatings and Linings Are Available
